Organising, Visualising, and Describing Data

Data Types and Data Organisation

1. Numerical vs Categorical
2. Cross-sectional vs Time Series
3. Structured vs Unstructured

Numerical vs Categorical Data

"Quantitative Data"

Numerical Data

values that can be counted or measured

Discrete

Countable

(**finite** number of values)

Continuous

Any fractional value

(**infinite** number of possible values)

Numerical vs Categorical Data

“Quantitative Data”

Numerical Data

values that can be counted or measured

Discrete

Countable

(**finite** number of values)

Continuous

Any fractional value

(**infinite** number of possible values)

Range-bound
(e.g. correlation $[-1, 1]$)

Numerical vs Categorical Data

Numerical Data

values that can be counted or measured

Discrete

Continuous

“Qualitative Data”

Categorical Data

labels used to classify a set of data into groups

Nominal

(labels have **no logical order**)

Ordinal

(can be **ranked in logical order**)

Numerical vs Categorical Data

Numerical Data

values that can be counted or measured

Discrete

Categorical Data

labels used to classify a set of data into groups

Nominal

(labels have **no logical order**)

Industry Classification

- ☐ Manufacturing
- ☐ Retail
- ☐ Food & Beverage

Return of
Mutual Fund

Continuous

Difference is
measurable

Fund B: 6%

Fund A: 10%

"Fund A outperforms Fund B by 4% pts"

Ordinal

(can be **ranked in logical order**)

Mutual Fund Ranking

1. Top quartile
2. 2nd quartile
3. 3rd quartile
4. Last quartile

Fund A:Q1

Fund B:Q2

Difference is **NOT**
measurable

"Fund A performed
better than Fund B"

Data Types and Data Organisation

1. Numerical vs Categorical

2. Cross-sectional vs Time Series

3. Structured vs Unstructured

Cross-sectional vs Time Series Data

Cross-Sectional Data

*comparable observations all taken at **specific time***

e.g. Sales data of 4 companies in 2011

Company	2011
A	\$24,000
B	\$122,500
C	\$34,000
D	\$72,800

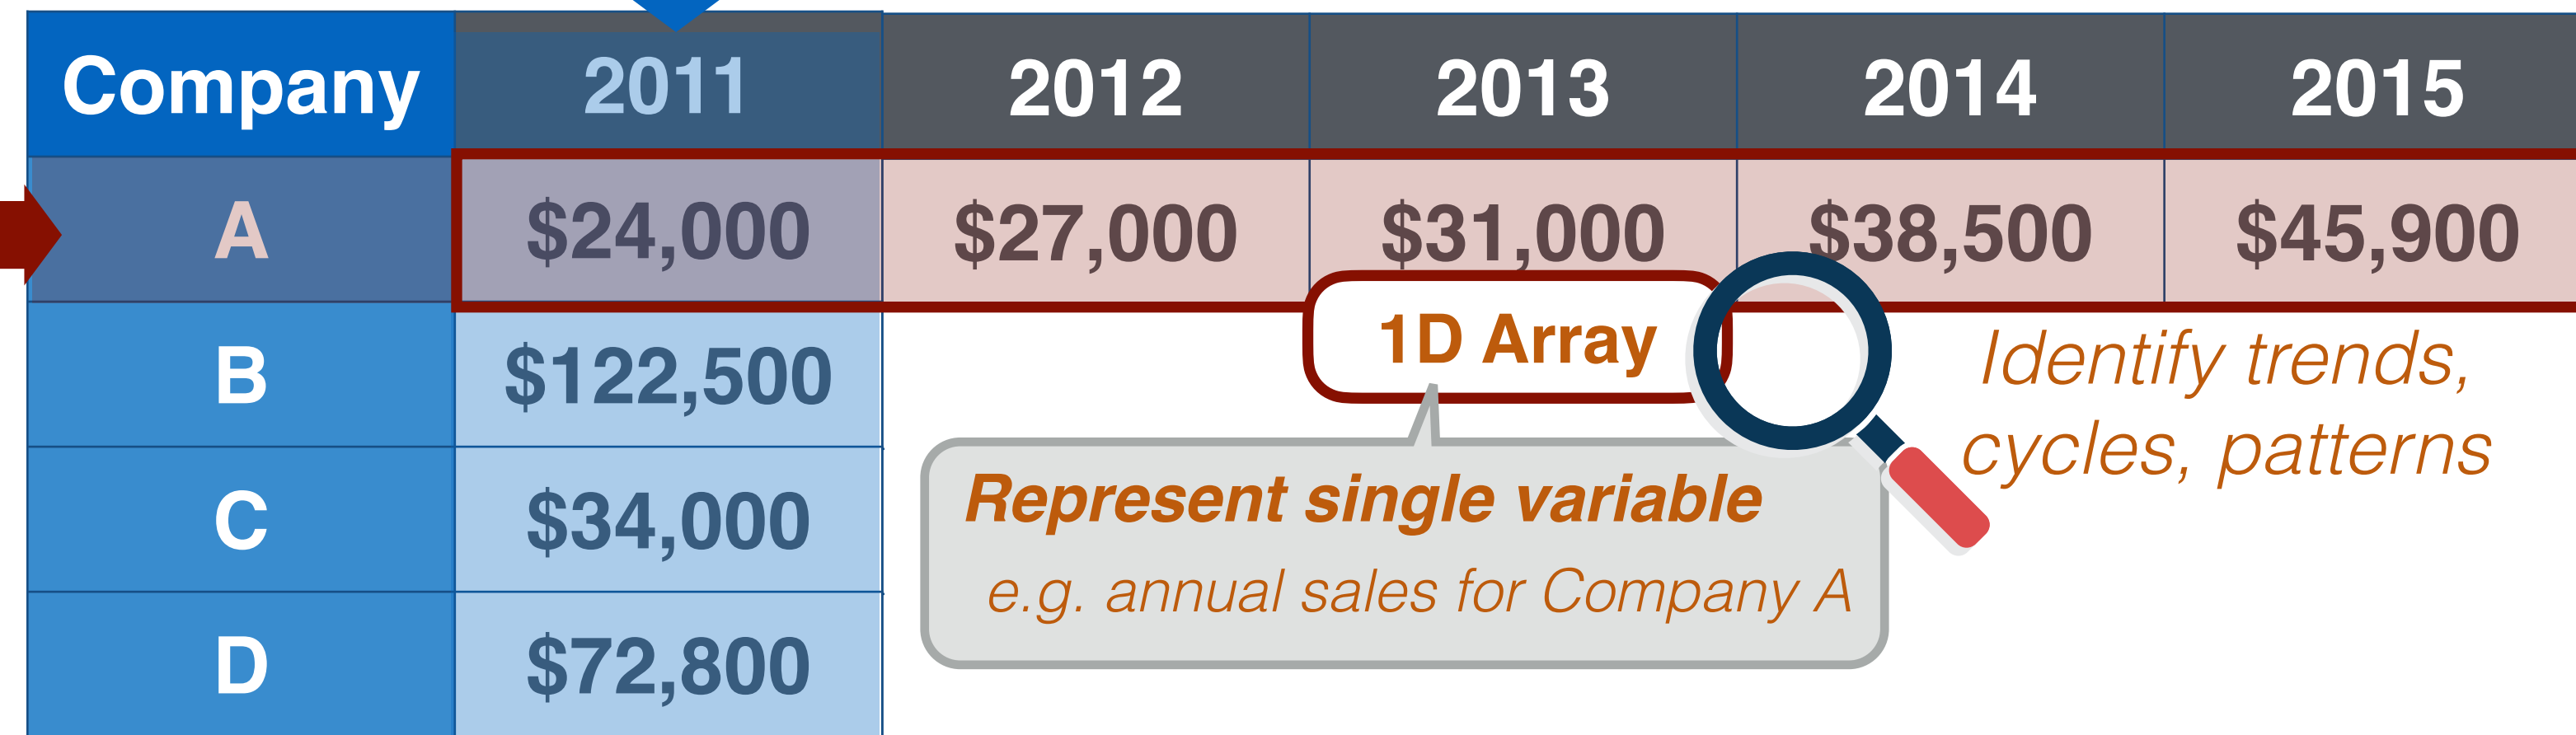

Cross-sectional vs Time Series Data

Cross-Sectional Data

*comparable observations all taken at **specific time***

Time Series Data

*set of observations taken periodically over a **period of time***

Company	2011	2012	2013	2014	2015
A	\$24,000	\$27,000	\$31,000	\$38,500	\$45,900
B	\$122,500				
C	\$34,000				
D	\$72,800				

Forecasts

1D Array

Represent single variable

e.g. annual sales for Company A

Identify trends, cycles, patterns

Data Types and Data Organisation

1. Numerical vs Categorical
2. Cross-sectional vs Time Series
3. Structured vs Unstructured

Cross-sectional vs Time Series Data

Panel
Data

Cross-Sectional Data

Time Series Data

Company	2011	2012	2013	2014	2015
A	\$24,000	\$27,000	\$31,000	\$38,500	\$45,900
B	\$122,500	\$98,000	\$111,800	\$144,700	\$151,000
C	\$34,000	\$35,000	\$52,000	\$45,800	\$61,000
D	\$72,800	\$100,200	\$116,700	\$148,000	\$202,800

sequential

cross
section

2D Array / Data Table

Compare **trends** of the
same measure across
different entities

Structured vs Unstructured Data

Structured Data

organised in a **defined** way

Market data

e.g. security prices

Analytical data

e.g. earnings forecasts

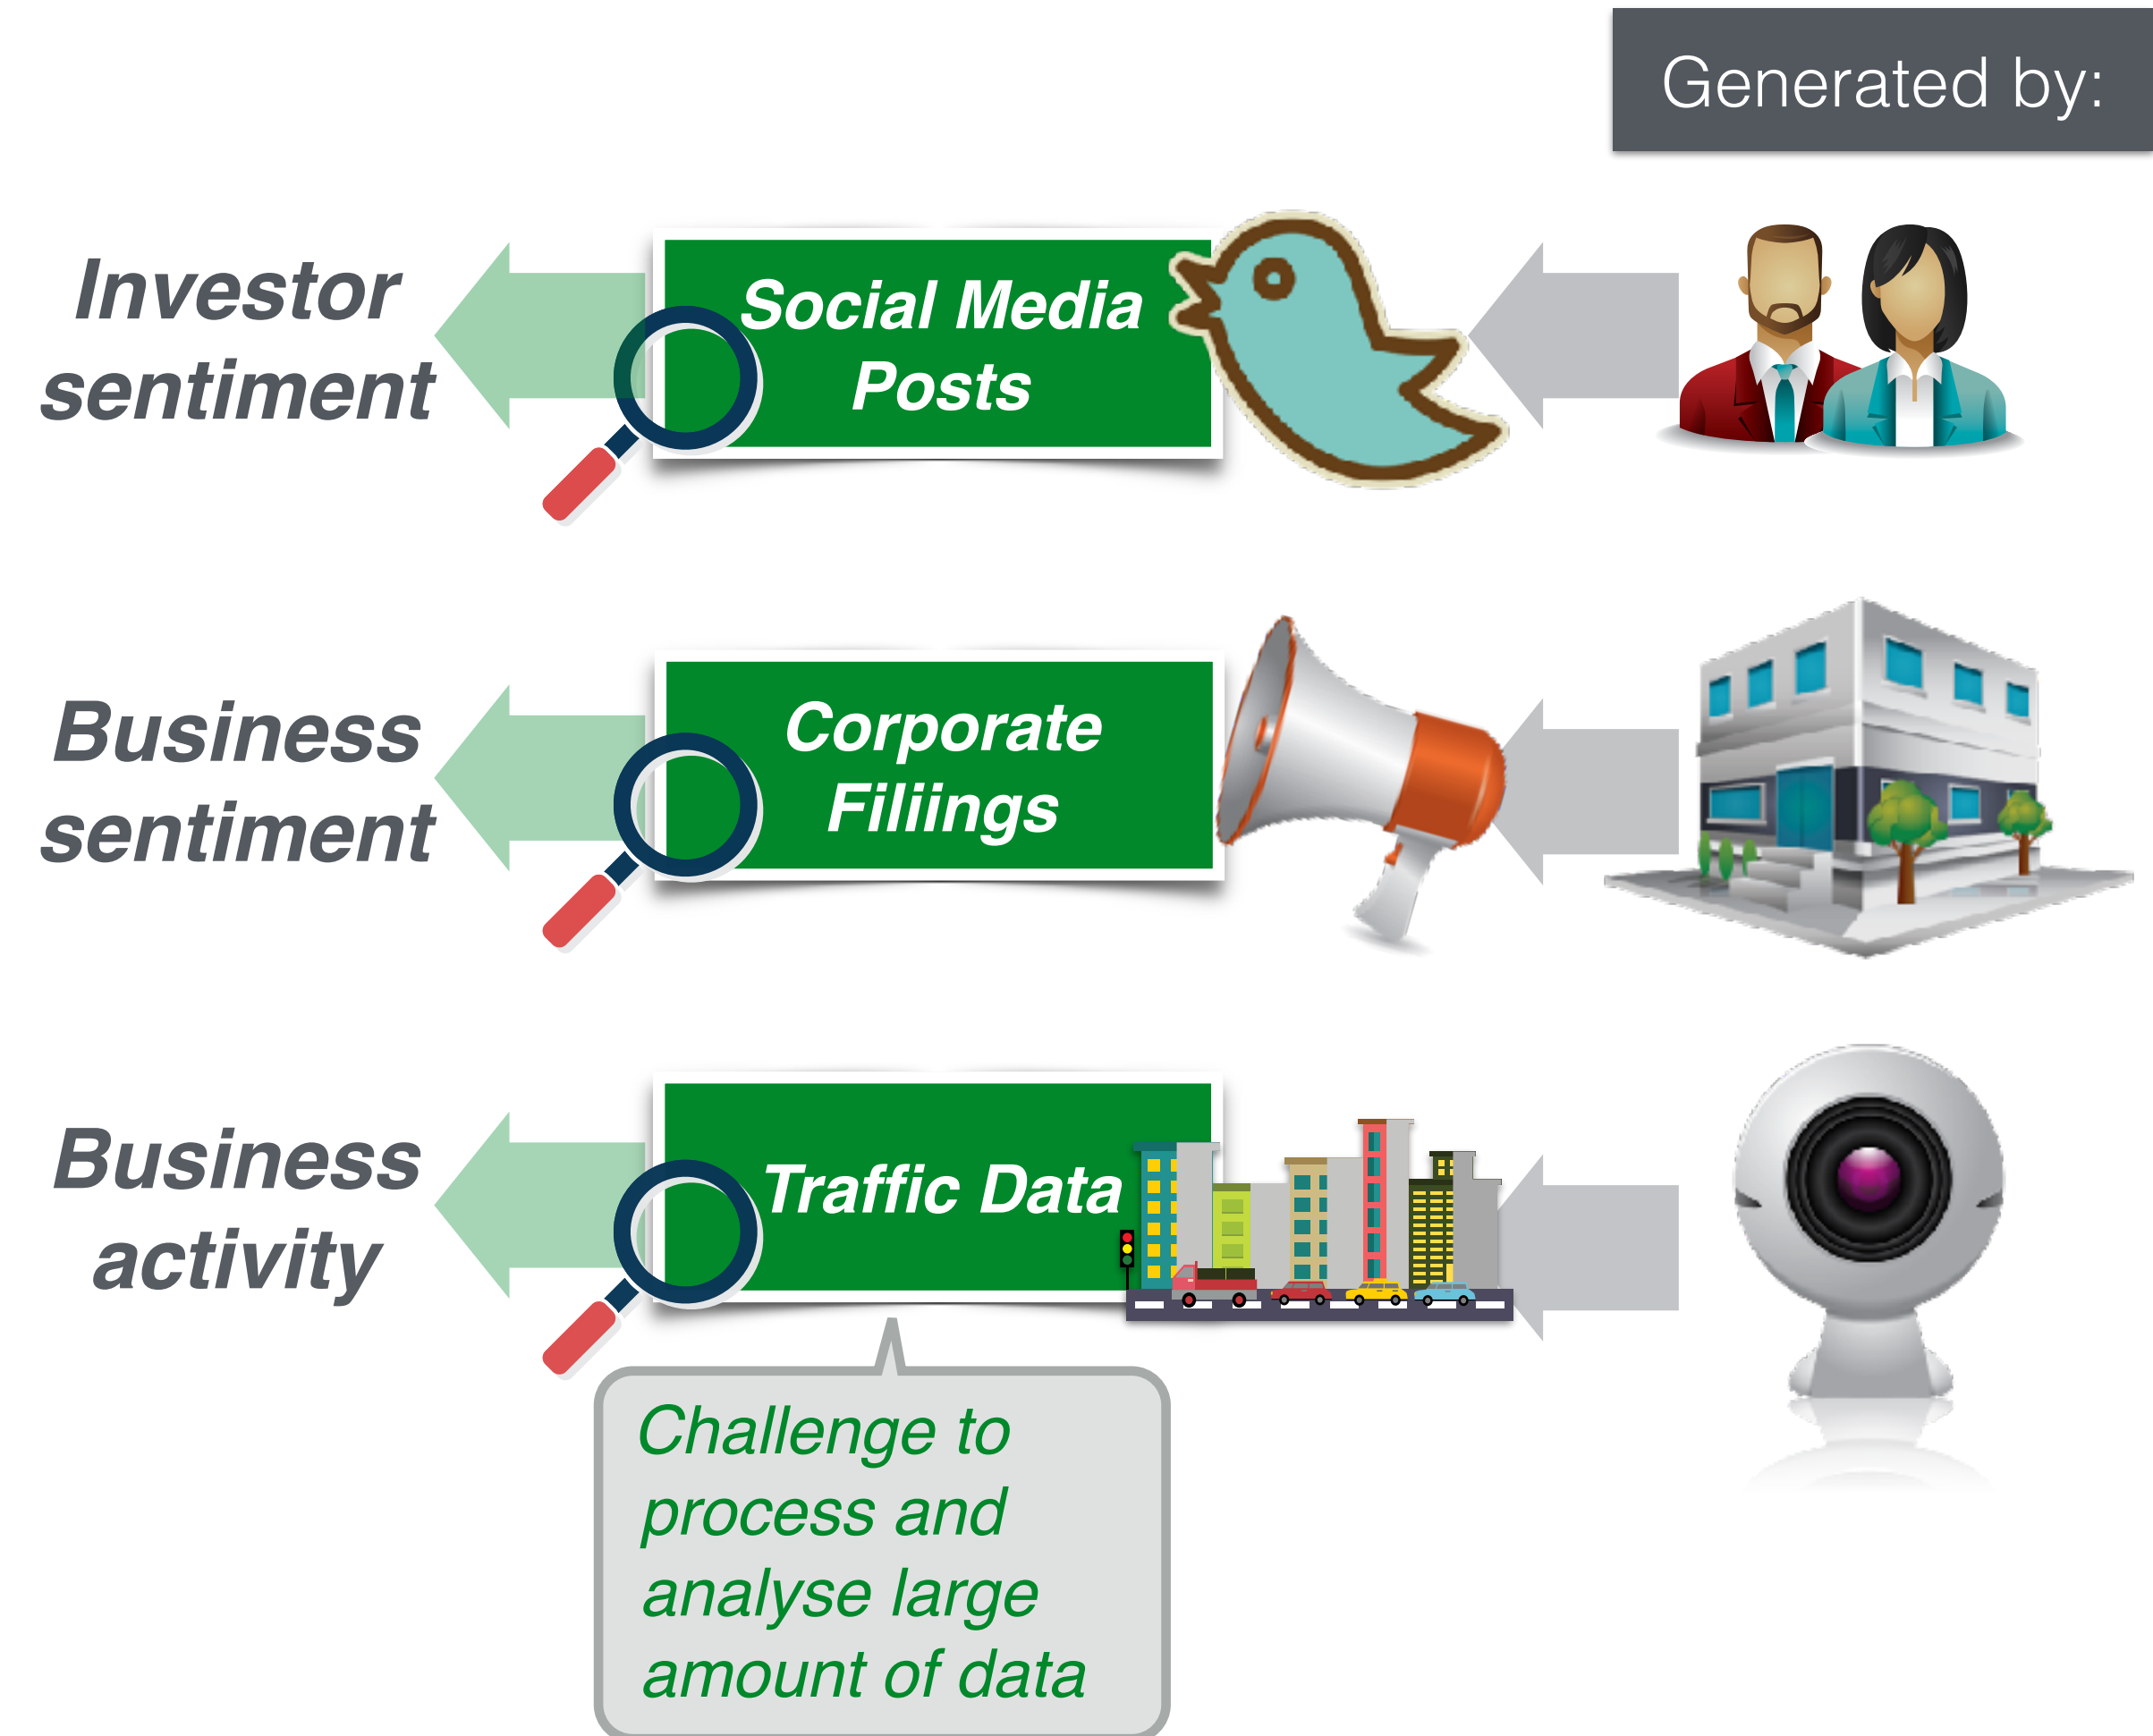

Fundamental data

e.g. accounting values

Unstructured Data

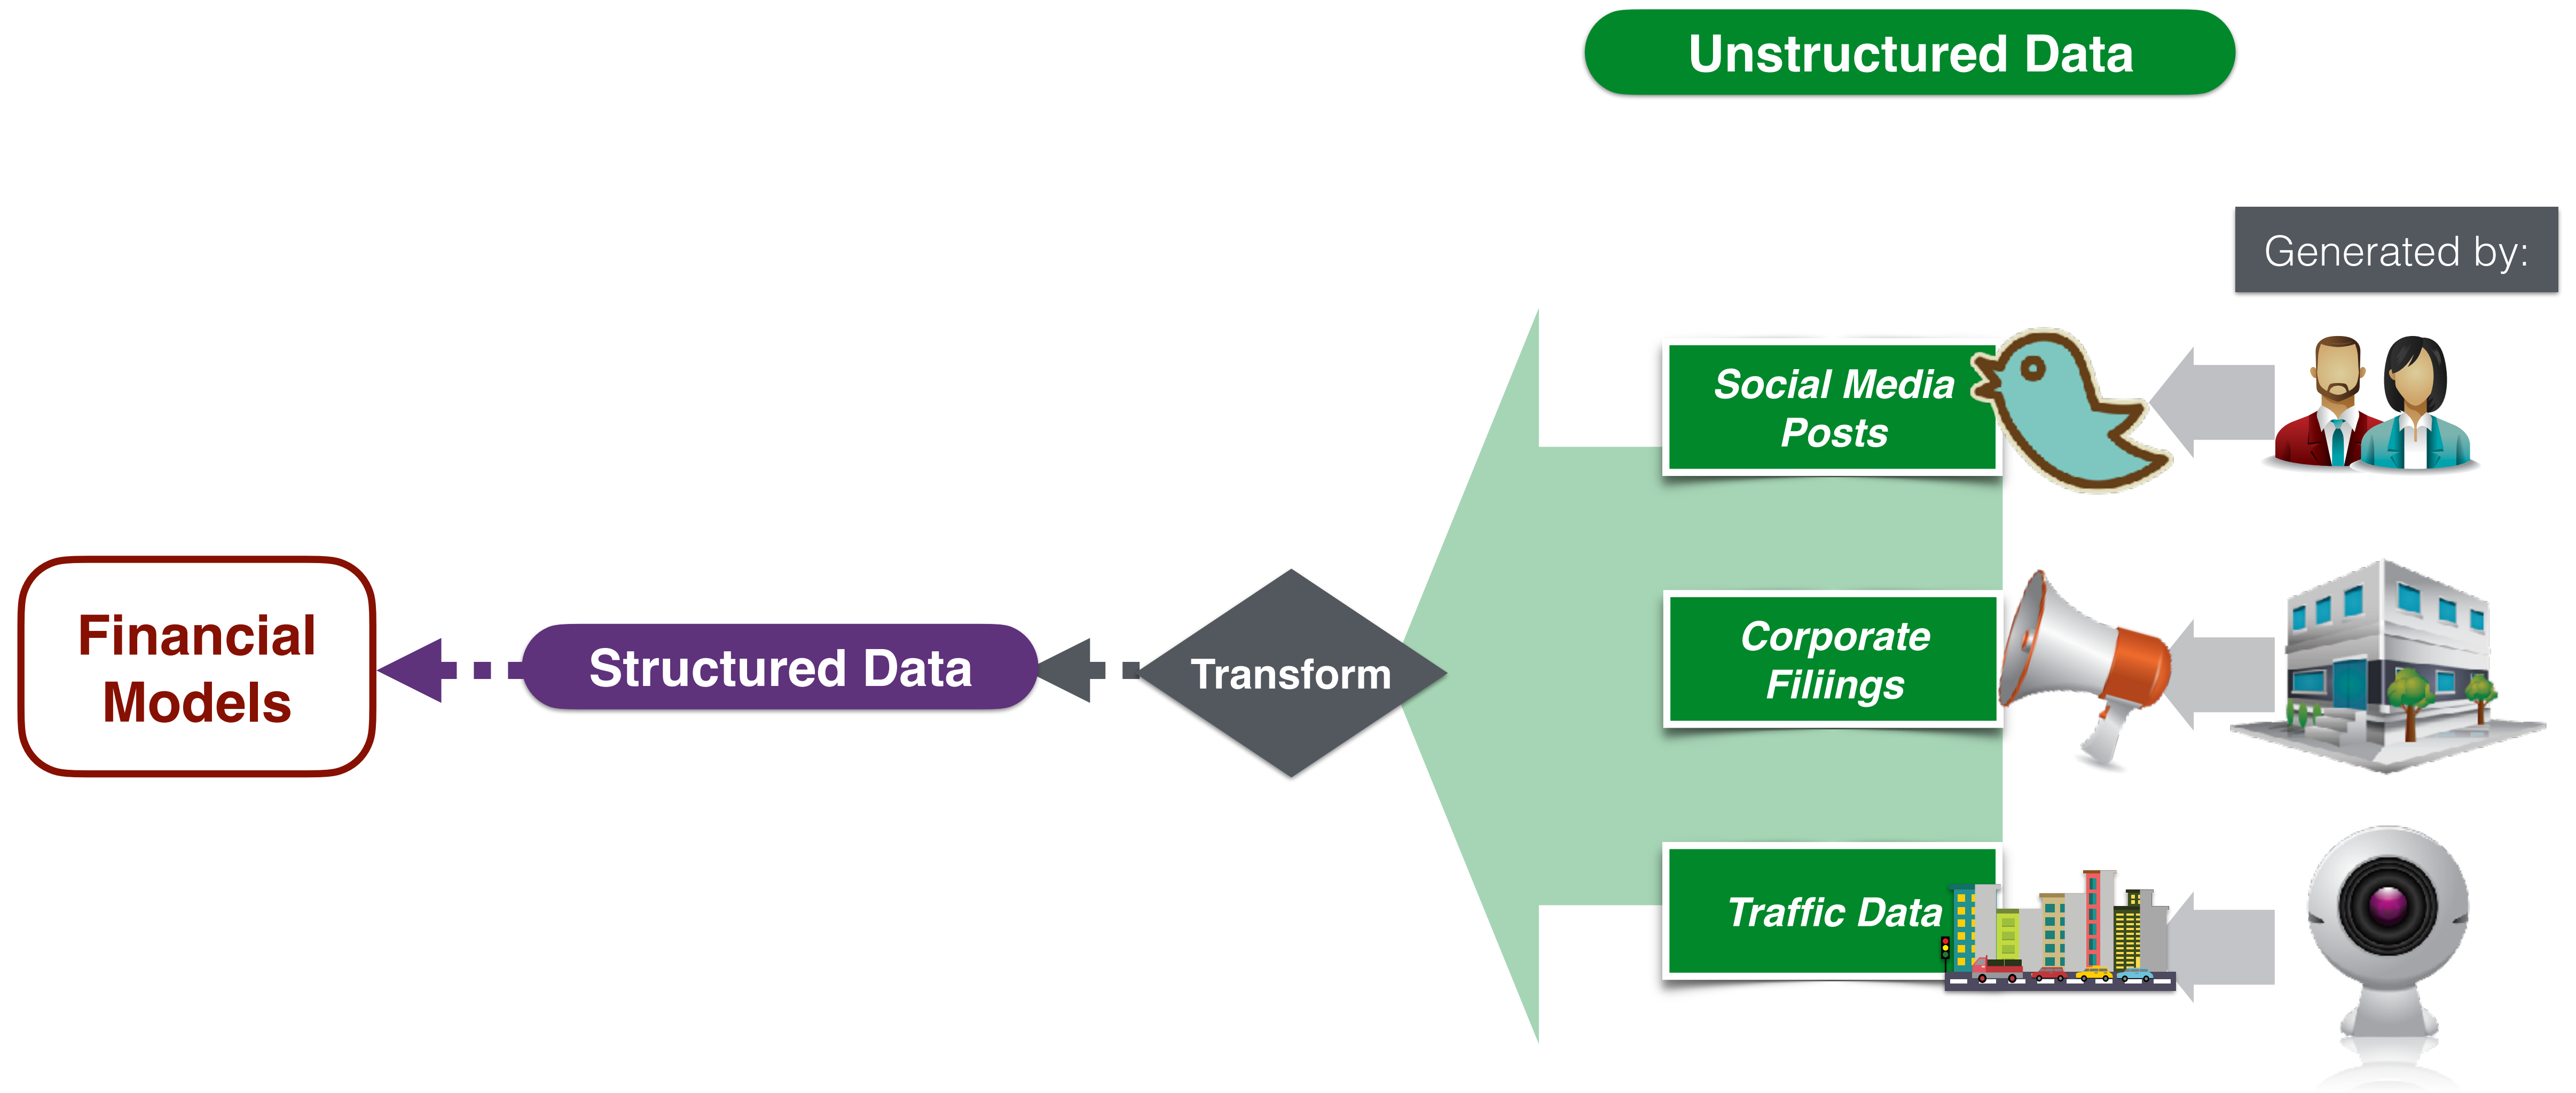

information in a form with **no defined structure**

Data Types and Data Organisation

1. Numerical vs Categorical
2. Cross-sectional vs Time Series
3. Structured vs Unstructured

Structured vs Unstructured Data
